

PAYMENT SERVICE RUNBOOK

Service Name:

Payment Service

Symptoms:

- HTTP 500 returned for payment requests
- Increased API latency
- Payment retries observed
- Customer complaints

Possible Causes:

- Redis unavailable
- PostgreSQL unavailable
- Kafka broker unreachable
- Connection pool exhausted

Investigation Steps:

1. Check Pod Status

```
kubectl get pods -n payment
```

2. Check Logs

```
kubectl logs payment-service-6fd74
```

3. Check Redis

redis-cli ping

Expected:

PONG

4. Check Database

SELECT count(*) FROM payments;

Resolution:

- Restart Redis
- Increase connection pool size
- Restart payment deployment

kubectl rollout restart deployment payment-service

Verification:

- HTTP 200 responses
- Payment success rate above 99%
- Redis memory below 80%
